

RESILIENCE FOR TOMORROW: The 2030 Vision

The anticipated completion of the Ophir Water Treatment Plant by 2030 carries profound implications for our community. It will expand PCWA's total water treatment capacity and provide an alternative treatment location. It will also allow essential maintenance work to be done at our Foothill Water Treatment Plant, our largest plant. This strategic move helps to ensure a seamless supply during maintenance or emergencies, enhancing our community's resilience. It's about ensuring that our communities have the water they need when they need it, regardless of the circumstances.
